

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) A vehicle traveling state recording method comprising:
recording information on traveling states, the information including traveling speeds of a vehicle, in a memory built in a computer, the computer controlling an engine and an amount of fuel supply;
stopping the recording of the information on the traveling states when the vehicle stops;
reading the recorded information out from the memory; and
outputting the read-out information from an output terminal.
2. (Original) The vehicle traveling state recording method as defined in claim 1, wherein the recorded information is read after stopping the vehicle.
3. (Original) The vehicle traveling state recording method as defined in claim 1, wherein the information on the traveling states is recorded in predetermined cycles; and
at least the predetermined cycles of the information is read out after stopping of travel of the vehicle.
4. (Original) The vehicle traveling state recording method as defined in claim 1, wherein the recorded information on the traveling states is read out by a tool for diagnosis adapted for the computer for engine control.
5. (Previously Presented) The vehicle traveling state recording method as defined in claim 1, further comprising:
changing a connection state of a predetermined terminal of the computer for engine control to perform a predetermined operation; and

displaying the recorded traveling speed displayed in a blinking state of a lamp according to a preset code.

6. (Previously Presented) The vehicle traveling state recording method as defined in claim 1, further comprising:

changing a connection state of a predetermined terminal of the computer for engine control to perform a predetermined operation; and

displaying the recorded traveling speed on a speed meter of the vehicle.

7. (Original) The vehicle traveling state recording method as defined in claim 1, further comprising:

mounting a navigator for retrieving a speed limit of a road during travel in the vehicle; and

recording the information together with the speed limit retrieved by the navigator.

8. (Original) The vehicle traveling state recording method as defined in claim 1, wherein the information on the traveling states further includes:

a number of revolutions of an engine;

a intake manifold pressure; and

an opening angle of a throttle.

9. (Currently Amended) A computer mounted in a vehicle and controlling an engine according to a preset program, the computer comprising:

an input section for inputting information on traveling states, the information including traveling speeds of the vehicle;

a memory built in the computer, wherein the computer controls an amount of fuel supply, the memory recording the information ~~inputted~~ input to the input section; and

a controller for controlling the information to be sequentially recorded into the memory in predetermined cycles, the controller stopping the recording of the information when the vehicle stops, and the controller outputting the information recorded in the memory.

10. (Original) The computer as defined in claim 9, wherein the input section receives a vehicle speed signal inputted to a speed meter of the vehicle as the information indicating the traveling speed.

11. (Original) The computer as defined in claim 10, further comprising a signal generator for generating the vehicle speed signal in a simulation manner and providing the signal for the speed meter according to the information when the controller outputs the information recorded into the memory.

12. (Original) The computer as defined in claim 9, wherein the information on the traveling states further includes:

a number of revolutions of an engine;

a intake manifold pressure; and

an opening angle of a throttle.

13. (Previously Presented) A vehicle traveling state recording method comprising the steps of:

recording information on traveling states including a traveling speed of a vehicle in a computer for engine control when the vehicle is running;

reading the recorded information out by a predetermined operation;

changing a connection state of a predetermined terminal of the computer for engine control to perform the predetermined operation; and

displaying the recorded traveling speed displayed in a blinking state of a lamp according to a preset code.

14. (Previously Presented) A vehicle traveling state recording method comprising the steps of:

recording information on traveling states including a traveling speed of a vehicle in a computer for engine control when the vehicle is running;

reading the recorded information out by a predetermined operation;

mounting a navigator for retrieving a speed limit of a road during travel in the vehicle; and

recording the information together with the speed limit retrieved by the navigator.

15-16. (Canceled)
